Change Management Policy

Pannon Office Services Ltd. | Internal policy

Document ID	CHG-POL-01	**Version**	1.0
Owner	IT Operations Lead, Csaba Tóth	**Approved by**	Managing Director, Marta Székely
Approval date	25 August 2026	**Effective date**	1 September 2026
Review date	1 September 2027	**Applies to**	Pannon Office Services Ltd.

Purpose and scope

This policy governs changes to production services, applications, identity settings, databases, and shared repositories. It requires a recorded decision before production work starts, evidence that the change was tested, and a documented route for urgent changes. These are Pannon Office Services requirements; ISO/IEC 27001 does not prescribe these specific approval deadlines.

Roles

Role	Responsibility
Change owner	Creates the ServiceNow change record, assesses impact and risk, attaches tests and rollback steps, and records the outcome.
Service owner	Confirms business need, affected service, and acceptable implementation window.
Change Manager	Checks required fields and approvals before implementation; maintains the change register.
Change Advisory Board (CAB)	Reviews medium- and high-risk planned changes and records decisions, conditions, and actions.
On-call IT lead / IT Director	May authorize an emergency change before implementation; the IT Director provides retrospective review.

Required control steps

Ref.	Requirement
CHG-01	Record every production change in ServiceNow before work begins. Include a unique change ID, owner, affected service or asset, reason, risk and impact, planned window, test evidence, rollback plan, approver, and implementation result.
CHG-02	For a planned or standard change, the service owner and Change Manager must approve the record before deployment. The test must pass and rollback steps must be available before implementation.
CHG-03	The CAB meets weekly. Medium- and high-risk changes require a recorded CAB decision before deployment. Low-risk routine changes may follow a standard-change model only after the CAB approves the model and test conditions before first use. The model owner reviews each model at least every six months.
CHG-04	Use the emergency route only to address an active security risk or an imminent service interruption. The on-call IT lead or IT Director must authorize work before implementation. Record the reason, risk, tests performed or deferred, and rollback option in the ticket.

Emergency change follow-up and records

Ref.	Requirement
CHG-05	For an emergency change, the IT Director and CAB must complete retrospective review and record approval by the end of the second business day after implementation. The change owner records the result and any follow-up by the next business day.
CHG-06	The Change Manager retains the ServiceNow request, approval history, test and rollback evidence, deployment record, CAB minutes, and closure outcome for at least two years.

CAB records and exceptions

Minutes identify the meeting date, attendees, change IDs considered, decision, conditions, action owner, and due date. A later meeting discussion does not replace an approval required before deployment. A planned change cannot be reclassified as emergency after the fact. If a required approval is missing, the Change Manager records the deviation and escalates it to the IT Operations Lead and ISMS Manager. All times are local company time; business days are Monday to Friday.
